Overview

GLM-4.6 achieves comprehensive enhancements across multiple domains, including real-world coding, long-context processing, reasoning, searching, writing, and agentic applications. Details are as follows:

Longer context window: The context window has been expanded from 128K to 200K tokens, enabling the model to handle more complex agentic tasks.

Superior coding performance: The model achieves higher scores on code benchmarks and demonstrates better real-world performance in applications such as Claude Code, Cline, Roo Code and Kilo Code, including improvements in generating visually polished front-end pages.

Advanced reasoning: GLM-4.6 shows a clear improvement in reasoning performance and supports tool use during inference, leading to stronger overall capability.

More capable agents: GLM-4.6 exhibits stronger performance in tool use and search-based agents, and integrates more effectively within agent frameworks.

Refined writing: Better aligns with human preferences in style and readability, and performs more naturally in role-playing scenarios.

Introducing GLM-4.6

1. Comprehensive Evaluation

In evaluations across 8 authoritative benchmarks for general model capabilities—including AIME 25, GPQA, LCB v6, HLE, and SWE-Bench Verified—GLM-4.6 achieves performance on par with Claude Sonnet 4/Claude Sonnet 4.6 on several leaderboards, solidifying its position as the top model developed in China.

2. Real-World Coding Evaluation

To better test the model's capabilities in practical coding tasks, we conducted 74 real-world coding tests within the Claude Code environment. The results show that GLM-4.6 surpasses Claude Sonnet 4 and other domestic models in these real-world tests.

In terms of average token consumption, GLM-4.6 is over 30% more efficient than GLM-4.5, achieving the lowest consumption rate among comparable models.

To ensure transparency and credibility, Z.ai has publicly released all test questions and agent trajectories for verification and reproduction. (Link: <https://huggingface.co/datasets/zai-org/CC-Bench-trajectories>).

Quick Start

The following is a full sample code to help you onboard GLM-4.6 with ease.

cURL

Official Python SDK

Official Java SDK

OpenAI Python SDK

Basic Call

```
curl -X POST "https://api.z.ai/api/paas/v4/chat/completions" \
-H "Content-Type: application/json" \
-H "Authorization: Bearer your-api-key" \
-d '{
  "model": "glm-4.6",
  "messages": [
    {
      "role": "user",
      "content": "As a marketing expert, please create an attractive slogan for my
product."
    },
    {
```

```

        "role": "assistant",
        "content": "Sure, to craft a compelling slogan, please tell me more about your
product."
    },
    {
        "role": "user",
        "content": "Z.AI Open Platform"
    }
],
"thinking": {
    "type": "enabled"
},
"max_tokens": 4096,
"temperature": 1.0
}'

```

Streaming Call

```

curl -X POST "https://api.z.ai/api/paas/v4/chat/completions" \
-H "Content-Type: application/json" \
-H "Authorization: Bearer your-api-key" \
-d '{
    "model": "glm-4.6",
    "messages": [
        {
            "role": "user",
            "content": "As a marketing expert, please create an attractive slogan for my
product."
        },
        {
            "role": "assistant",
            "content": "Sure, to craft a compelling slogan, please tell me more about your
product."
        },
        {
            "role": "user",
            "content": "Z.AI Open Platform"
        }
    ],
    "thinking": {
        "type": "enabled"
    },
    "stream": true,
    "max_tokens": 4096,
    "temperature": 1.0
}'

```
