Tired of limits? Get premium performance at a fraction of the cost, fully compatible with top coding tools like Claude Code and Cline. Starting from just \$10/month. Try it now →

Overview

GLM-4.7 Series are Z.AI's models, featuring upgrades in two key areas: enhanced programming capabilities and more stable multi-step reasoning/execution. It demonstrates significant improvements in executing complex agent tasks while delivering more natural conversational experiences and superior front-end aesthetics.

GLM-4.7

Output Modalities

Text

Context Length

200K

Maximum Output Tokens

128K

Capability

Thinking Mode

Offering multiple thinking modes for different scenarios

Streaming Output

Support real-time streaming responses to enhance user interaction experience

Function Call

Powerful tool invocation capabilities, enabling integration with various external toolsets

Context Caching

Intelligent caching mechanism to optimize performance in long conversations

Structured Output

Support for structured output formats like JSON, facilitating system integration

Usage

Agentic Coding

Multimodal Interaction and Real-Time Application Development

Web UI Generation and Visual Aesthetic Optimization

High-Quality Dialogue and Complex Problem Collaboration

Immersive Writing & Character-Driven Creation

Professional-Grade PPT/Poster Generation

Intelligent Search and Deep Research

Introducing GLM-4.7

1

Comprehensive Coding Capability Enhancement

GLM-4.7 achieves significant breakthroughs across three dimensions: programming, reasoning, and agent capabilities:

Enhanced Programming Capabilities: Substantially improves model performance in multi-language coding and terminal agent applications; GLM-4.7 now implements a “think before acting” mechanism within programming frameworks like Claude Code, Kilo Code, TRAE, Cline, and Roo Code, delivering more stable performance on complex tasks.

Enhanced Frontend Aesthetics: GLM-4.7 shows marked progress in frontend generation quality, producing visually superior webpages, PPTs, and posters.

Enhanced Tool Invocation Capabilities: GLM-4.7 demonstrates improved tool invocation skills, scoring 67 points on the BrowseComp web task evaluation and achieving an open-source SOTA of 84.7 points on the τ^2 -Bench interactive tool invocation benchmark, surpassing Claude Sonnet 4.5

Enhanced reasoning capabilities: Significantly improved mathematical and reasoning skills, achieving 42.8% on the HLE (“Human Last Exam”) benchmark—a 41% increase over GLM-4.6 and surpassing GPT-5.1

Enhanced General Capabilities: GLM-4.7 delivers more concise, intelligent, and empathetic conversations, with more eloquent and immersive writing and role-playing

Code Arena: A professional coding evaluation system with millions of global users participating in blind tests. GLM-4.7 ranks first among open-source models and domestic models, outperforming GPT-5.2

In mainstream benchmark performance, GLM-4.7’s coding capabilities align with Claude Sonnet 4.5: Achieved top open-source ranking on SWE-bench-Verified; Reached an open-source SOTA score of 84.9 on LiveCodeBench V6, surpassing Claude Sonnet 4.5; Achieved 73.8% on SWE-bench Verified (a 5.8% improvement over GLM-4.6), 66.7% on SWE-bench Multilingual (a 12.9% improvement), and 41% on Terminal Bench 2.0 (a 16.5% improvement).

2

GLM-4.7-Flash: Small but Powerful

In mainstream benchmarks like SWE-bench Verified and τ^2 -Bench, GLM-4.7-Flash achieves open-source SOTA scores among models of comparable size. Additionally, compared to similarly sized models, GLM-4.7-Flash demonstrates superior frontend and backend development capabilities.

In internal programming tests, GLM-4.7-Flash excels at both frontend and backend tasks. Beyond programming scenarios, we also recommend experiencing GLM-4.7-Flash in general-

purpose applications such as Chinese writing, translation, long-form text processing, and emotional/role-playing interactions.

3

Perceived Improvement in Real Programming Scenarios

Performance on Real Programming Tasks

Controlled Evolution of Reasoning Capabilities

Comprehensive Task Execution Capabilities

Frontend Aesthetic Enhancement

In the Claude Code environment, we tested 100 real programming tasks covering core capabilities like frontend, backend, and instruction following. Results show GLM-4.7 demonstrates significant improvements over GLM-4.6 in both stability and deliverability. With enhanced programming capabilities, developers can more naturally organize their development workflow around "task delivery," forming an end-to-end closed loop from requirement understanding to implementation.

API Documentation: Learn how to call the API.

Quick Start

The following is a full sample code to help you onboard GLM-4.7 with ease.

cURL

Official Python SDK

Official Java SDK

OpenAI Python SDK

Basic Call

```
curl -X POST "https://api.z.ai/api/paas/v4/chat/completions" \
-H "Content-Type: application/json" \
-H "Authorization: Bearer your-api-key" \
-d '{
  "model": "glm-4.7",
  "messages": [
    {
      "role": "user",
      "content": "As a marketing expert, please create an attractive slogan for my
product."
    },
    {
      "role": "assistant",
      "content": "Sure, to craft a compelling slogan, please tell me more about your
product."
    },
    {
      "role": "user",
      "content": "Z.AI Open Platform"
    }
  ],
  "thinking": {
    "type": "enabled"
  },
  "max_tokens": 4096,
  "temperature": 1.0
}'
```

Streaming Call

```
curl -X POST "https://api.z.ai/api/paas/v4/chat/completions" \
```

```
-H "Content-Type: application/json" \
-H "Authorization: Bearer your-api-key" \
-d '{
  "model": "glm-4.7",
  "messages": [
    {
      "role": "user",
      "content": "As a marketing expert, please create an attractive slogan for my
product."
    },
    {
      "role": "assistant",
      "content": "Sure, to craft a compelling slogan, please tell me more about your
product."
    },
    {
      "role": "user",
      "content": "Z.AI Open Platform"
    }
  ],
  "thinking": {
    "type": "enabled"
  },
  "stream": true,
  "max_tokens": 4096,
  "temperature": 1.0
}'
```
